

First outputs from the BioReg project now available

September 2017

The BioReg project proposes to create a platform of stakeholders who are able to influence and develop their regions towards bio-based industries and products in the field of wood waste. Five demonstrator case studies, which have set up renewable wood waste-based systems at different stages of the waste wood value chain, have been selected among European regions and 3 recipient regions were selected for this project in regards to their unused waste wood potential: Normandy (France), Lublin (Poland), Alentejo, Lisboa (Portugal).
